

Main classes:

We organized the application with the design pattern of MVVM.

Model- This class (in our project- RemoteControlRepository) is responsible for the logic and communication with the flightGear simulator (by ip address and port).

ViewModel- This class connect between the Model and the View.(hold field of the model).

Joystick(view)- This class responsible for joystick's view and his functionality.

MainActivity- This class get all data from the view and send it to viewModel and he (viewModel) send it to model.
